

Join orbit and empower green innovation

orbit enables **innovators** to successfully manage their Net-Zero Journey by **actively designing** low emission products.

It is the first solution that allows to **quantify** carbon footprints based on concept descriptions (text or CAD) and to enable users to analyse and shape **sustainable product life cycles**.

Current Status – First prototypes exist.

Currently the biggest task is to put together a team:
At the moment I'm working on the project alone.

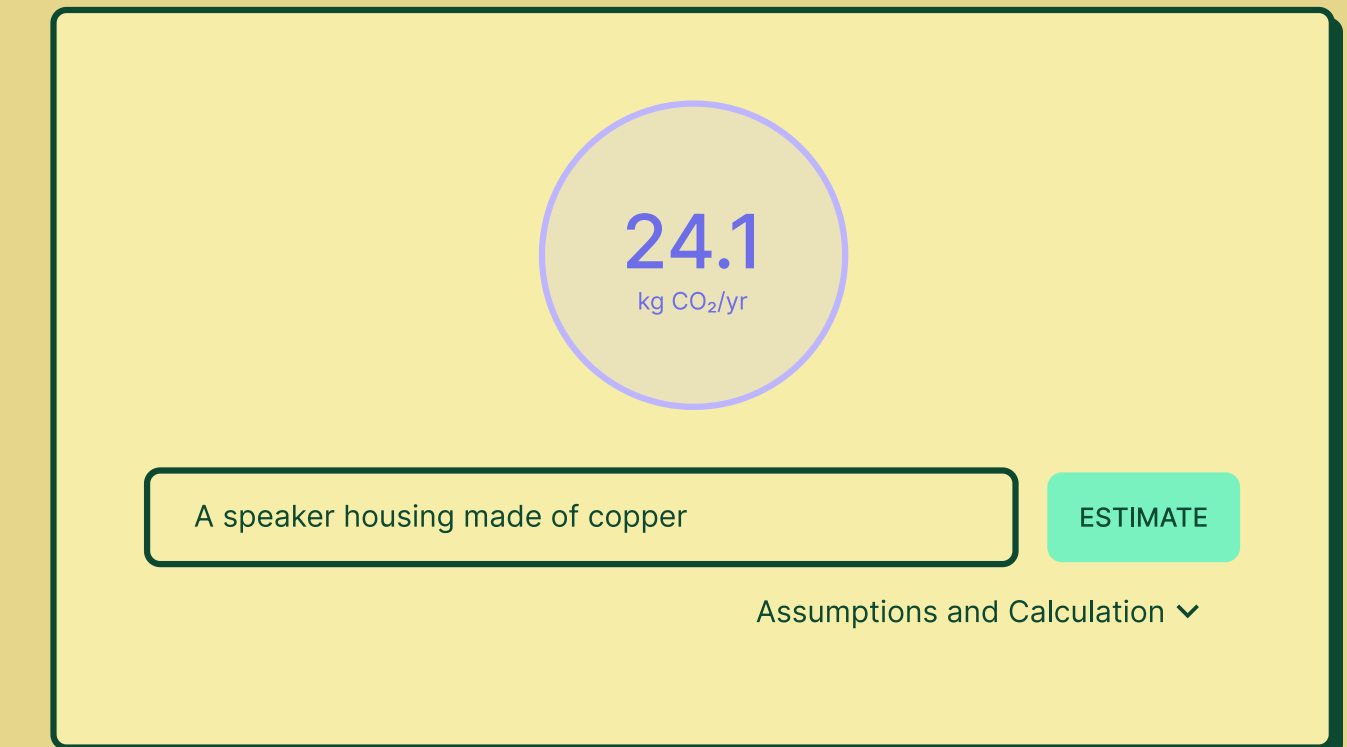

*You're passionate about contributing to a sustainable future?
You're a team player and experienced in leading teams and projects?*

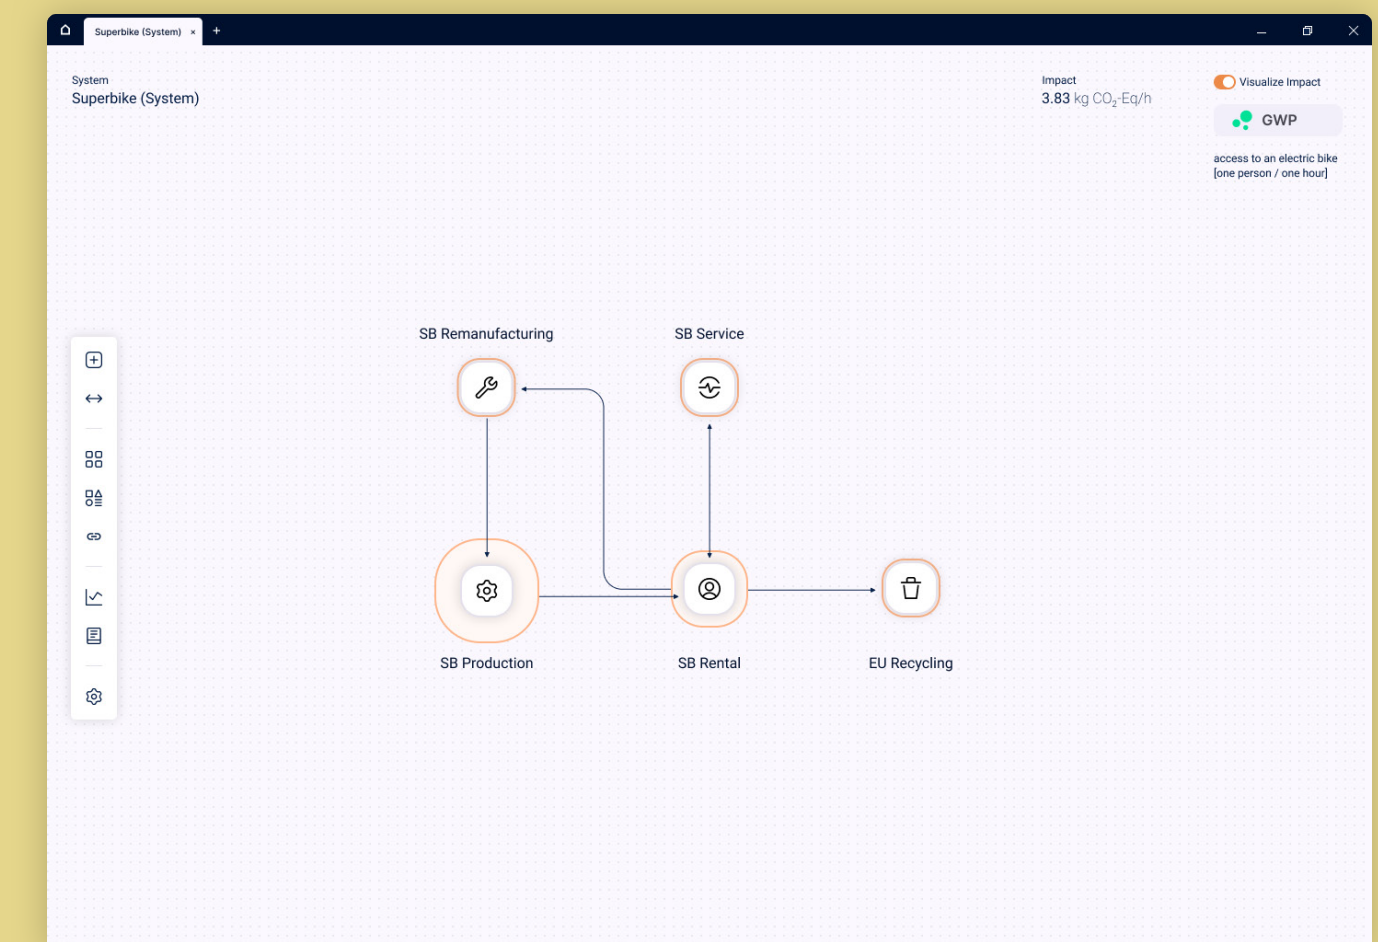

→ orbit is looking for co-founders as Business Developer (COO) or Full-Stack Developer (CTO)

Join orbit to work on a meaningful product that enables a better future. Since the project is in quite an early stage, it's your change to have a huge impact.
